CHANGES IN COLLAGE SITE 1.7.2

NEW FEATURES AND IMPROVEMENTS

Collage Site is an in-field registration tool for Topcon Scanners and Scanning Total Stations. Features and Improvements in this version of Collage Site are as follows:

- Added ability to find Release Notes from the Home menu
- Added Stockpile Volume Calculations feature
- If the wireless signal is too weak to initiate a scan transfer, you will now be returned to the Keep or Discard screen.
- Added new beta Elevation Measurement feature
- Improved Heatmap tool

BUG FIXES

The following issues have been resolved since the latest release of Collage Site:

- Fixed an issue where Direct Illumination would not deactivate in certain circumstances
- Fixed an issue where Auto Leveling while starting a scan would erase established input field values
- Fixed an issue where Exposure Mode wasn't updating in live image
- Fixed an issue that was causing installation errors for some users in certain circumstances
- Fixed an issue with the ESN-100 Auto Leveling when it was not necessary
- Fixed an issue where the vertical axis of station alignment would be missing in certain circumstances
